

ACT Health

What are the Likely Effects of Climate Change on the Food Environment of the ACT, and what are the Implications for Government Health Promotion Activities: Literature Review

Internship available for Summer, 2023

The ACT Health Directorate (AHD) is responsible for strategic direction and leadership of the ACT health system. AHD provides a strong policy and population health capability based on a foundation of world-leading health and medical research.

The Population Health Division contributes to the directorate's vision of a healthier Canberra by delivering evidenced-based population health programs, driving transformational change to improve long term health outcomes and protecting public health through education, advice and regulatory functions. Our goal is to reduce risks associated with population health, prevent illness and improve the health and wellbeing of the Canberra community.

The Health Promotion Section initiates and manages programs and initiatives that aim to improve the health and wellbeing of the ACT population. These initiatives are delivered in partnership with various stakeholders including schools, businesses, sporting clubs, community organisations and other government agencies. Health Promotion activities seek to influence the social and environmental conditions that impact on population and individual health. Initiatives target both the whole ACT population and specific population groups.

Project: What are the Likely Effects of Climate Change on the Food Environment of the ACT, and what are the Implications for Government Health Promotion Activities: Literature Review

Internship details	
Internship Availability	Summer 2023
Internship Discipline/s	Public Health / Health Promotion / Climate Change
Internship Level	Prefer postgraduate or 3 rd year; will consider 2 nd year
Available to International Students	No
Preferred Project Skills:	<ul style="list-style-type: none">• Evidence synthesis• Research methods

Host Supervisor	Cal Chikwendu, Director, Preventive and Population Health; cal.chikwendu@act.gov.au
Location	ACT Health Directorate staff are currently following working from home arrangements.

	Some in-office time (one day per week) will be offered located at Bowes St, Woden, ACT
Project Opportunities/Benefits for the Intern	The intern will have mentoring from the supervisor and will gain an understanding of how evidence contributes to policy and practice in a government setting.

Summary:

This project will carry out a literature review (peer reviewed and jurisdictional reports) to identify likely effects of climate change on food environments in the ACT and how government Health Promotion activities might respond to these challenges. Some stakeholder interviews may form part of this project.

Food environments are the physical, economic, political and socio-cultural contexts in which people engage with the food system to make their decisions about acquiring, preparing and consuming food. Health Promotion aims to influence the food environment to support healthy eating among the public in order to reduce the risk factors for a range of chronic conditions.
